

Cable thermocouple Mineral-insulated cable (MI cable) Model TC40

WIKA data sheet TE 65.40

for further approvals
see page 2

Applications

- For direct installation into the process
- Machine building
- Motors
- Bearings
- Pipes and vessels

Special features

- Sensor ranges from -40 ... +1,260 °C [-40 ... +2,300 °F]
- For insertion or screw-in with optional process connection
- Cable from fibreglass, PFA/PTFE, silicone and other cable sheath materials
- Versions with/without connector or connection housing (option)
- Explosion-protected versions (option)

Cable thermocouple, model TC40

Configurator

Standard articles

Description

Cable thermocouples are particularly suited to those applications in which the metal probe tip is mounted directly into bored holes (e.g. in machine components) or directly into the process for any application with no chemically aggressive media or abrasion.

A large number of different explosion protection approvals are available for the TC40.

For mounting into a thermowell, a spring-loaded compression fitting should be provided, since only this can press the measuring tip into the bottom of the thermowell. Otherwise a potentially critical force could be exerted on the measuring tip.

In the standard version the cable probes are manufactured without process connections. Fastening elements such as threaded connections, compression fittings, etc. are possible as options.

Explosion protection (option)

The permissible power, $P_{\max}$, as well as the permissible ambient temperature, for the respective category can be seen on the EC-type examination certificate and the certificate for hazardous areas or the operating instructions.

The internal inductance ($L_i = 1 \mu\text{H/m}$) and capacitance ($C_i = 200 \text{ pF/m}$) for cable probes should be taken into account when connecting to an intrinsically safe voltage supply.

Attention:

The transmitter, built into an optional connection housing, has its own certificate for hazardous areas. The permissible ambient temperature ranges of the built-in transmitters can be taken from the corresponding transmitter operating instructions and approvals.

Approvals (explosion protection, further approvals)

	SIL 2 Functional safety (only in conjunction with model T32 temperature transmitter)

4) Only with connection head, model 1/4000, 5/6000 or 7/8000 (see "Connection head")

Instruments marked with "ia" may also be used in areas only requiring instruments marked with "ib" or "ic".
 If an instrument with "ia" marking has been used in an area with requirements in accordance with "ib" or "ic", it can no longer be operated in areas with requirements in accordance with "ia" afterwards.

Approvals and certificates, see website

Sensor

Thermocouple per IEC 60584-1 or ASTM E230

Types K, J, E, N, T (single or dual thermocouple)

Measuring location

- Ungrounded (standard)

- Welded to the bottom (grounded)

Sensor types

Type	Validity limits of the class accuracy					
	IEC 60584-1				ASTM E230	
	Class 2		Class 1		Standard / special	
K	-40 ... +1,200 °C	[-40 ... +2,192 °F]	-40 ... +1,000 °C	[-40 ... +1,832 °F]	0 ... 1,260 °C	[0 ... 2,300 °F]
J	-40 ... +750 °C	[-40 ... +1,382 °F]	-40 ... +750 °C	[-40 ... +1,382 °F]	0 ... 760 °C	[0 ... 1,400 °F]
E	-40 ... +900 °C	[-40 ... +1,652 °F]	-40 ... +800 °C	[-40 ... +1,472 °F]	0 ... 870 °C	[0 ... 1,598 °F]
N	-40 ... +1,200 °C	[-40 ... +2,192 °F]	-40 ... +1,000 °C	[-40 ... +1,832 °F]	0 ... 1,260 °C	[0 ... 2,300 °F]
T	-40 ... +350 °C	[-40 ... +662 °F]	-40 ... +350 °C	[-40 ... +662 °F]	0 ... 370 °C	[0 ... 698 °F]

The table shows the temperature ranges listed in the respective standards, in which the tolerance values (class accuracies) are valid.

The actual operating temperature of the thermometer is limited both by the maximum permissible working temperature and the diameter of the thermocouple and the sheathed cable, as well as by the maximum permissible working temperature of the sheath material.

For detailed specifications for thermocouples, see IEC 60584-1 or ASTM E230 and Technical information IN 00.23 at www.wika.com.

Tolerance value

For the tolerance value of thermocouples, a cold junction temperature of 0 °C has been taken as the basis.

Minimum and maximum operating temperature

Process temperature

The process temperature is the temperature which prevails in the area between the probe tip and the process connection. This generally corresponds to the temperatures for which the thermocouple has been defined in accordance with IEC 60584-1 standard.

- Sheath material Ni alloy: Alloy 600
 - up to 1,200 °C (air)
 - standard material for applications which require specific corrosion-resistant properties under exposure to high temperatures, resistant to induced stress corrosion cracking and pitting corrosion in media containing chloride
 - resistant to corrosion caused by aqueous ammonia in all temperatures and concentrations
 - highly resistant to halogens, chlorine, hydrogen chloride
- Sheath material stainless steel
 - up to 850 °C (air)
 - good resistance against aggressive media and also against vapour and combustion gases in chemical media

Short insertion lengths and specific components can limit the operating temperature of the thermometer (e.g. PTFE ferrules on a compression fitting).

Ambient temperature

The area of the transition from MI cable to connection cable (see page 13) and all subsequent components are located in the region of ambient temperature.

If the ambient temperature is higher than the permissible temperature at the cable, connector or transition, the metal parts of the probe must be long enough so that the transition is located outside of the hot zone. At any point on the connection cable, the maximum temperature that may be attained is that for which the connection cable is specified. The probe itself can – within the validity limits of its class accuracy – be loaded higher.

It is important to ensure that the lowest of the maximum permissible ambient temperatures for connection cables, materials used such as sealing compounds in the transition sleeve or a fitted connector or case is not exceeded.

- Maximum temperature at connection housing: 85 °C
- Maximum temperature at connector: 85 °C
- Maximum temperature of the sealing compound at the transition: 250 °C
- Maximum temperature of vibration-resistant versions: 200 °C
- In an optional approval minimum and maximum temperature specified

Other variants on request

For information on the maximum permissible operating temperatures for the connection cable see page 14.

General design of the TC40

In sheathed thermocouples the flexible part of the probe consists of a mineral-insulated cable (MI cable). It features a metal outer sheath, which contains the insulated internal leads, embedded within a high-density ceramic compound.

Due to their flexibility and the small possible diameters, sheathed thermocouples can also be used in locations that are not easily accessible, since, with the exception of the probe tip and the transition sleeve of the connection cable, the sheath can be bent to a radius of five times the diameter of the cable.

Please note:

The flexibility of the sheathed thermocouple must be considered, especially when the flow rates are relatively high.

For temperature measurement in a solid body, the diameter of the bore into which the probe should be inserted, should be no more than 1 mm larger than the probe diameter. Each air gap acts as an insulation layer.

Mineral-insulated cable (MI cable)

Sensor in the probe tip

Versions

■ With connection cable

Standard version

Single wires

Connection cable with stainless steel braid

Connection cable with protective metal armouring

■ With connector

Fitted on the MI cable

Fitted at the cable end

For all ignition protection types except Ex i, gas applies:
Position of the connector is only permitted outside the hazardous area.

■ With connection housing, fitted at the cable end

Angled probes

TC40 cable thermocouples can be delivered in a pre-formed shape. In this case, the position of the bend is defined by a further dimension.

Using a fixed threaded connection is not recommended, as the angled probe would need to be screwed into the process with a wide sweeping movement.

Legend:

- X Distance of the bend to the end of the tube
- A Insertion length of the probe (section which is built into the process)
- Y Distance from the centre of the bend to the dimensioning plane of the threaded connection (only if a threaded connection is used)

1135654.01

11356546.01

Process connection

TC40 cable thermocouples can be fitted with optional process connections.

To minimise heat dissipation errors via the threaded connection, the insertion length, A, should be at least 25 mm long.

Please note:

- For parallel threads (e.g. G 1/2) the dimensioning always refers to the sealing collar of the threaded connection nearest the process
- For tapered threads (e.g. NPT) the measurement plane is located approx. in the centre of the thread

Legend:

- X Position of the threaded connection (independent of the type of connection)
- A Insertion length in the process

International designs

■ Without process connection

Smooth probe for insertion

Design	Illustration	Material process connection	Thread size	Diameter sheathed cable	Material sheathed cable
Without process connection		-	-	■ 1.5 mm ■ 2 mm ■ 3 mm ■ 4.5 mm ■ 6 mm ■ 8 mm ■ 1/16 in/0.063 in [1.59 mm] ■ 1/8 in/0.125 in [3.17 mm] ■ 3/16 in/0.188 in [4.75 mm] ■ 1/4 in/0.250 in [6.35 mm] ■ 3/8 in/0.375 in [9.53 mm]	■ Alloy 600 ■ Stainless steel 1.4571 ■ Stainless steel 316L

■ Fixed threaded connection, thread

- Version to mount the probe into a threaded coupling with a female thread
- Probe must be rotated in order to screw it into the process
- Therefore, first fit the version mechanically and then connect it electrically

Design	Illustration	Material process connection	Thread size	Diameter sheathed cable	Material sheathed cable
Fixed threaded connection, thread		■ Stainless steel 1.4571 ■ Stainless steel 316L	■ G 1/8 B ■ 1/8 NPT ■ M8 x 1.0	■ 1.5 mm ■ 2 mm ■ 3 mm ■ 1/16 in/0.063 in [1.59 mm] ■ 1/8 in/0.125 in [3.17 mm]	■ Alloy 600 ■ Stainless steel 1.4571 ■ Stainless steel 316L

Design	Illustration	Material process connection	Thread size	Diameter sheathed cable	Material sheathed cable
Fixed threaded connection, thread		- Stainless steel 1.4571 - Stainless steel 316L	- G 1/4 B - G 3/8 B 1/4 NPT 3/8 NPT - M10 x 1.0	3 mm 4.5 mm 6 mm 1/8 in/0.125 in [3.17 mm] 3/16 in/0.188 in [4.75 mm] 1/4 in/0.250 in [6.35 mm]	- Alloy 600 - Stainless steel 1.4571 - Stainless steel 316L

■ Compression fitting with stainless steel ferrule

- Simple adjustment at the mounting point to the desired insertion length
- Compression fitting can be slid along the probe (only before the first tightening)
- After loosening, sliding along the sheathed cable is no longer possible
- Dimensions A and X describe the condition at time of supply
- Smallest possible length X of approx. 50 mm (due to the length of the compression fitting)
- Max. temperature at the process connection: 500 °C (unpressurised)
- Max. pressure loading: 20 bar (at max. 150 °C, Ø 6 mm)

Design	Illustration	Material process connection	Thread size	Diameter sheathed cable	Material sheathed cable
Compression fitting with stainless steel ferrule		- Stainless steel 1.4571 - Stainless steel 316L	- G 1/8 B 1/8 NPT - M8 x 1.0	3 mm 1/8 in/0.125 in [3.17 mm]	- Alloy 600 - Stainless steel 1.4571 - Stainless steel 316L

■ Compression fitting with PTFE ferrule

- Basic construction as for the version with stainless steel ferrule
- Ferrules can be set several times
- After loosening, sliding along the sheath is still possible
- Max. temperature at process connection: 150 °C
- For use without pressure

Design	Illustration	Material process connection	Thread size	Diameter sheathed cable	Material sheathed cable
Compression fitting with PTFE ferrule		■ Stainless steel 1.4571 ■ Stainless steel 316L	■ G 1/8 B ■ 1/8 NPT ■ M8 x 1.0	■ 1.5 mm ■ 2 mm ■ 3 mm ■ 1/16 in/0.063 in [1.59 mm] ■ 1/8 in/0.125 in [3.17 mm]	■ Alloy 600 ■ Stainless steel 1.4571 ■ Stainless steel 316L

■ Spring-loaded compression fitting with stainless steel ferrule

- Easy adjustment to the desired insertion length at the mounting point, while at the same time maintaining the spring pre-tension
- Compression fitting can be slid along the probe (only before the first tightening)
- After loosening, sliding along the sheathed cable is no longer possible
- Dimensions A and X describe the condition at time of supply
- Smallest possible length X of approx. 100 mm (due to the length of the compression fitting)
- Max. temperature at process connection: 150 °C
- For use without pressure
- Hydraulic oil-tight versions on request

Transition

Standard version

The junction between the metal part of the probe and the connection lead or stranded wire should not be immersed within the process and must not be bent. Compression fittings should not be attached to the transition sleeve.

The dimensions of the transition sleeve are dependent upon the probe diameter, on the construction of the connection cable and its number of inner conductors - depending on the connection method. Also, operation with ambient temperatures $< -40\text{ }^{\circ}\text{C}$ has an influence on the dimensions of the transition sleeve.

Transition sleeve with the same diameter as the probe

Optionally, a transition sleeve can also be selected that has the same diameter as the metal probe. This makes it possible to slide on cable glands or compression fittings from both ends of the probe. The transition is hardly visible.

The operating limits of the transition sleeve do not change, however, i.e. it must still remain outside the process and should not be loaded with a compression fitting.

Standard diameter transition sleeve and probe

- 6 mm
- 8 mm
- 1/4 in

Bend protection

A bend protection (spring or shrink hose) is used to protect the transition point from rigid probe to flexible connection lead. This should always be used when a relative movement between the connection lead and the thermometer mounting is expected.

For designs to Ex n or Ex e, the use of bend protection is mandatory.

Bend protection spring

Shrink hose

Both versions should be considered to be technically equivalent with respect to their function as bend protection.

Sealing plugs for shipping	Not applicable, transport protection							

1) Not available for BVS connection head

2) Only for BSZ-H connection head

3) Not available for ½ NPT thread size cable entry

4) With appropriate mating connector connected

5) Suitable cable gland required for operation

Transmitter built into the connection housing (option)

A transmitter can be mounted in an optional connection housing.

Output signal 4 ... 20 mA and HART® protocol		
Transmitter (selectable versions)	Model T16	Model T32
Data sheet	TE 16.01	TE 32.04
Output		
■ 4 ... 20 mA	x	x
■ HART® protocol	-	x
Explosion protection	Optional	Optional

For detailed specifications on the explosion protection of the transmitter, see respective transmitter data sheet.

Accessories, connection housing

Pipe mounting kit, stainless steel (for field case)

Pipe mounting kit, stainless steel (for 5/6000, DIH50/DIH52, TIF50/TIF52)

Fixing bracket (for wall mounting) 92 x 60 x 50 mm, stainless steel (for connection head models BSZ and BSZ-H)

Connector (option)

Cable thermocouples can be supplied with connectors fitted.
The following options are available:

Illustration	Model
A small, rectangular connector with a textured, knurled section on one end and a flat, rectangular face on the other.	Lemos connector (male)
A cylindrical connector with a tapered, conical front section and a threaded section in the middle.	Binder/Amphenol screw/plug-in connector (male)
A cylindrical connector with a tapered front section and a complex, multi-faceted body with a locking mechanism on the side.	Harting connector (male)
A cylindrical connector with a knurled section and a threaded section.	Binder screw/plug-in connector, M12 x 1 (male)
A rectangular connector with a flat face and two small, protruding pins on one side.	Thermo-connector (male)

The figures are not to scale.

Ingress protection per IEC/EN 60529

Degrees of protection against solid foreign bodies (defined by the 1st index number)

First index number	Degree of protection / Short description	Test parameters
5	Dust-protected	per IEC/EN 60529
6	Dust-tight	per IEC/EN 60529

Degrees of protection against water (defined by the 2nd index number)

Second index number	Degree of protection / Short description	Test parameters
4	Protected against splash water	per IEC/EN 60529
5	Protected against water jets	per IEC/EN 60529
6	Protected against strong water jets	per IEC/EN 60529
7	Protected against the effects of temporary immersion in water	per IEC/EN 60529
8	Protected against the effects of permanent immersion in water	as agreed upon

Model TC40 is available in the following IP degrees of protection:

- IP40
- IP50
- IP54 (standard)
- IP65
- IP67

The specified degrees of protection apply under the following conditions:

- Use of a suitable cable gland
- Use of a cable cross-section appropriate for the gland or select the appropriate cable gland for the available cable
- Adhere to the tightening torques for all threaded connections

Classification of the IP protection zones of the probe

- Version with connection cable

- Version with connection housing, fitted at the cable end

■ Version with connector, fitted at the cable end

■ Version with connector, fitted at the MI cable

IP ingress protection types of the connection housing

Connection housing	Version	IP ingress protection
Field case	Plastic (ABS) / aluminium	IP65
Connection head	KN4-A	IP65
	KN4-P	
	BSZ	
	BSZ-H	
	1/4000	IP66
	5/6000	
	5/6000 with DIH50	
	7/8000	
	7/8000 with DIH50	
Field transmitter	TIF50/TIF52	IP66

IP ingress protection types of the connector

Connector	Version	IP ingress protection
Binder	Series 680	IP40
	Series 692	
	Series 423	
Amphenol	C16-3	IP40
Lemos	Size 0 S	IP50
	Size 1 S	
	Size 2 S	
	Size 1 E	IP65
Harting	7D	IP65
	8D	
	8U	
M12 x 1	4-pin	IP65
Thermo-connector	2-pin, standard/miniature	IP00
	3-pin, standard/miniature	

Electrical connection

Without connector

Lemosa connector

max. permissible temperature range: -55 ... +250 °C

Screw/plug-in connector (Amphenol, Binder)

Series 680, series 423 (shielded)

max. permissible temperature range: -40 ... +85 °C

Thermo-connector (male)

Binder screw/plug-in connector (male), M12 x 1 (series 713)

Harting connector

Standard terminal block

For the electrical connections of built-in temperature transmitters see the corresponding data sheets or operating instructions.

Rack-mounting terminals

Operating conditions

Mechanical requirements

Version	
Standard	max. 50 g peak-to-peak, 10 ... 500 Hz

The information on vibration resistance refers to the probe tip.

Storage temperature

-40 ... +80 °C

Other storage temperatures on request

Shipping information

Model TC40 thermocouple in “straight” version, with lengths > 1,100 mm is wound and delivered in coils.

Certificates (option)

Certification type	Measurement accuracy	Material certificate
2.2 test report	x	x
3.1 inspection certificate	x	x
DKD/DAkkS calibration certificate	x	-

The different certifications can be combined with each other.

The minimum length (metal part of the probe or the length of the probe below the process connection) for carrying out a measurement accuracy test 3.1 or DKD/DAkkS is 100 mm.
