

Dräger C-C440

Series: Dräger Com-Control

The Dräger C-C440 is a mask communication control unit with a large push-to-talk (PTT) button for easy radio operation. Its sturdy, robust design meets IP67 and MIL-STD-810G requirements; it is specially designed for use inside gas-tight suits, and ATEX versions are available. The large press surface ensures reliable voice transmission and operation in all conditions, even when the C-C440 is worn under protective clothing or in a radio pouch. A solid quick-connect plug lets it combine with any Dräger headset, allowing connection to various radios. It is waterproof and robustly built for many different applications. Where the system is to be used in potentially explosive atmospheres, the C-C440 is designed to meet ATEX requirements. The Dräger MS-COM can be combined with the C-C440 via a stereo plug and adapted to radios.

- 01 Large push-to-talk (PTT) button
- 02 Robust design to IP67 and MIL-STD-810G
- 03 Designed for use inside gas-tight suits
- 04 Quick-connect to all Dräger headsets
- 05 Waterproof
- 06 ATEX versions available
