

Dräger C-C550

Series: Dräger Com-Control

The Dräger C-C550 is a mask communication control unit for tactical radios with an integrated loudspeaker and microphone. It can be connected to various radios, and its sturdy, robust design is approved to IP67 and MIL-STD-810G. The integrated receiver allows independent use even without a connected headset, and two large push-to-talk (PTT) buttons make it easy to use. The integrated microphone and loudspeaker allow the C-C550 to be used without a headset. A solid quick-connect plug lets it combine with any Dräger headset, allowing connection to various radios. It is waterproof and robustly built for many different applications. For use in potentially explosive atmospheres it is designed to meet ATEX requirements and carries the ATEX mark. The two large PTT buttons give reliable voice transmission whether the unit is worn under protective clothing or in a radio pouch. The Dräger MS-COM can be combined with the C-C550 via a stereo plug and adapted to radios.

- 01 Integrated loudspeaker and microphone
- 02 Independent use without a headset
- 03 Two large push-to-talk (PTT) buttons
- 04 Robust design approved to IP67 and MIL-STD-810G
- 05 Quick-connect to all Dräger headsets
- 06 ATEX marked
