

Dräger PAS Colt

Series: Dräger PAS

The Dräger PAS Colt is a hip-worn, ambient-air-independent short-duration escape and entry breathing apparatus. It is ideal for confined-space entry, and wearing it on the hip gives freedom of movement. Depending on the operation, it is fully approved as a short-duration entry unit, an airline emergency escape device or both. Its ergonomic harness keeps its shape, so even inexperienced users can put it on quickly and easily. An optional 'drop-off' function lets the cylinder unclip from the hip belt, which is useful when entering tight or confined spaces. The harness is machine washable and easy to maintain. Cylinder options by approval: for NEN-EN 139 airline and NEN-EN 402 escape, 2 l 200 bar aluminium, 3 l 200 bar steel and 2 l 300 bar carbon composite; for NEN-EN 137 work, 3 l 200 bar steel, 3 l 300 bar and 2 l 300 bar carbon composite. Product options are Escape Entry Airline or Airline Escape with 10, 15 and 20 minute cylinder options.

- 01 Hip-worn short-duration escape/entry device
- 02 Ideal for confined-space entry
- 03 Approved for airline, short-duration entry or escape
- 04 Ergonomic harness that keeps its shape
- 05 Optional cylinder drop-off function
- 06 Machine-washable harness
