

Dräger X-plore 3000

Series: Dräger X-plore 3000

The Dräger X-plore 3000 is a series of twin-filter half masks with a Dräger-specific bayonet connection. The series has two models: the low-maintenance, cost-effective X-plore 3300 (Soft-TPE body) and the X-plore 3500 for long-term protection in harsh conditions (DrägerFlex-TPE body, skin-friendly and hypoallergenic). Side-mounted filters and the flat design give a wide field of vision and allow use with a safety visor. The FlexiFit head harness, cross-adjustable straps and flexible nose bridge spread weight and pressure, and the mask fits securely with safety glasses. Three sizes (S, M, L) are available. The connection takes Dräger X-plore bayonet filters only; Rd40 filters do not fit. Protection covers particles, gases and vapours depending on the filter used. The X-plore 3500 has a drop-down strap so the mask can be lowered without removing the helmet. The mask body weighs about 95 g and comes with a reusable storage bag. Pre-packed sets with filters are available for dust, chemical and painting/horticulture work.

- 01 Twin side filters, Dräger X-plore bayonet connection
- 02 X-plore 3300 (Soft-TPE) and X-plore 3500 (DrägerFlex-TPE)
- 03 Three sizes: S, M, L
- 04 FlexiFit head harness; drop-down strap on 3500
- 05 About 95 g (mask only)
- 06 EN 140, AS/NZS 1716:2012, NIOSH
